

Children's Innovation Project

Deepening Children's Exploration with Materials:
a professional learning workshop for early childhood
teachers and informal educators

Please join *Children's Innovation Project* co-directors to learn more about a pedagogical approach in support of young children's deep exploration with raw materials. Participants will explore with materials, practice observational drawing as a method for slowing down to see one's thinking, discuss the relationship between children's development of language-logic, and reflect on what it might mean to support children's sustained attention and intrinsic curiosities with raw materials. Teams of educators, program leaders and administrators are encouraged to attend.

Participants will receive materials to explore with children in their teaching/learning contexts.

Please RSVP to: info@cippgh.org
ACT48 / PQAS credits available
